Why Server Racks Australia?

SRA manufacture a range of server racks which have been designed to be upgradable at any point to suit your current and/or future requirements. Once your order has been placed our professional team will ensure your investment is manufactured to the highest standard and delivered on time.

SIDE PANELS

The side panels sit flush within the frame for extra security and allow rows of racks to be bayed together easily.

Commercial side panels are fitted with external panel clips allowing the panels to be installed and removed with ease. They can also be secured from inside the rack thereby removing the need for an external lock.

FRAMES

All frames in the SRA range are designed and manufactured from 2mm zinc annealed (rust proof coating) steel. The frame is fully welded and load rated to 800kg (static) distributed weight. The top and bottom of each frame has a low profile of 35mm to minimise the overall height.

DOORS

The doors are constructed from a single piece of 1.2mm zinc annealed steel which provides excellent rigidity and minimises twist or flop in the doors. All doors sit flush inside the frame providing increased security and a clean aesthetic look.

1-Point Locking

A total of six configurations are available; solid, vented or window doors with 1 or 3 point locking.

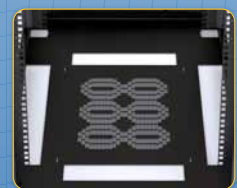

3-Point Locking

A range of keying systems are also available including keyed and digital.

CABLE ENTRY & VENTING

4x large cable entry slots in the top and bottom of the frame provide easy access to the rack for cabling and power supply. The venting in the middle allows for the addition of a 5 or 6 fan tray. (Cable entry blanking panels are also available)

Size			Frame	Side Panel	Doors		
RU	Width (mm)	Depth (mm)			Vented	Solid	Window
12	600	900	800-251303	800-251341	800-250408	800-250407	800-250409

Custom sizes are available upon request

AVAILABLE COLOURS

SRA racks are available in two standard colours, Grey Nurse and Black.

A range of custom colours from the dulux range are available upon request.

Black
#90132679

Grey Nurse
#90137543

Upgradability

Server Racks Australia design our racks with your best interests in mind by providing you with the option of upgrading your rack, security or density, if or when you require. This is because of our unique Universal Frame.

Security upgrades

If extra security is required for your server rack it is possible to upgrade your doors and locking mechanisms to government endorsed locking systems (SCEC). This is achieved by upgrading from commercial to government or SCEC (class C or class B) doors and with the addition of secure cable entries. These additions can be made without removing the rack from service.

Cabinet Security/Density Matrix
